Keeping You Connected

Congratulations, JCESOM Faculty!

As you can see from the size of this newsletter, JCESOM faculty have been taking their academic obligations very seriously and making great scholarly contributions. I wish we had space to publish all of the impressive accomplishments reported by faculty. Since space was limited, however, we could include only items from 2008 forward.

PEN is beginning a series of faculty profiles focused on the scholarly activities of junior and senior faculty. This issue shines a "Scholar Spotlight" on Dr. Mark Stecker, who is providing energetic new leadership to the Curriculum Committee, and Drs. Richard Crespo and Piyali Dasgupta, two dynamic researchers enhancing JCESOM's research portfolio with highly respected basic and applied research addressing lung cancer and chronic disease.

It is exciting to see the energy and excellence your scholarly work represents. We look forward to printing more new items when issue 3 of PEN is published this fall!

Grants Received

Departments of Biochemistry and Microbiology

Dr. Elaine Hardman received a training grant supplement of \$122,000 to her National Cancer Institute grant, Omega-3 fat to reduce risk for breast cancer: 1R01CA114018-01A2.

Dr. Hardman received a \$20,000 clinical trial pilot grant from Marshall's Cell Differentiation and Development Center for the proposal Inhibition of Nuclear Factor kappa B in Indolent B Cell Malignancies.

Pharmacology, Physiology & Toxicology

Dr. Piyali Dasgupta's undergraduate student, Kathleen C. Brown, was chosen for a \$2500 Sigma Xi "Grant-in-Aid of Research grant," from NASA for her grant proposal "Nicotinic Receptor Signaling in Retinal Angiogenesis."

Dr. Dasgupta obtained a MU-CDDC pilot grant for the proposal Nicotinic Receptor Signaling in Atherogenesis. Amount: \$20,000 for one year.

Just in: INBRE renewed

Dr. Gary Rankin and co-investigators have received a 5-year renewal totaling more than \$17 million for the West Virginia IDeA Network of Biomedical Research Excellence (INBRE). Marshall, in partnership with WVU, will continue to lead a research network consisting of 11 undergraduate institutions in order to strengthen the schools' biomedical research potential and enhance the pipeline of students entering careers in biomedical research.

The multi-disciplinary research theme for the network is cellular and molecular biology, with an emphasis on cardiovascular disease and cancer.

Other Marshall faculty working as senior/key personnel for the grant include Dr. Elsa Mangiarua, Michael McCarthy, Dr. Donald Primerano and Dr. Nalini Santanam.

National Award

Internal Medicine

Abid Yaqub: Recipient of Abbott Thyroid Research Clinical Fellowship & Mentor Award, The Endocrine Society Annual Meeting 2008, San Francisco, Calif.

Richard Crespo: Chronic disease in Appalachia and abroad

Richard Crespo, PhD, is a tenured professor in the Department of Family and Community Health with an appointment in research and service. His degree is from Michigan State University in curriculum research and development. Currently he is involved in community health programs in West Virginia, the Appalachian region and overseas.

Dr. Crespo manages ten grants and contracts in the fields of chronic disease management, school health, mental health, and oral health. He directs a staff of sixteen professionals and support staff.

In collaboration with the Children's Hospital of Philadelphia, he is conducting a longitudinal study to identify the relationship between health and school performance. His team also is working on a pilot project with four school-based health centers to identify effective strategies for reducing childhood obesity.

Through a grant he received from the Appalachian Regional Commission and the Claude Worthington Benedum Foundation, his team is developing school-based preventive and early detection programs for children's oral health.

With funding from the Appalachian Regional Commission and the Centers for Disease Control, Dr. Crespo and his staff have developed an innovative program for establishing diabetes coalitions in rural, poor counties in the Appalachian Region. Currently there are 67 coalitions in nine states, and 85 percent of coalitions whose funding period ended have remained active. His training program called *Diabetes Today for Community Leaders* is endorsed by the Centers for Disease Control.

Dr. Crespo and his team have trained more than 120 leaders throughout the Appalachian Region as facilitators of the Stanford Chronic Disease Self-Management Program. They have also created a series of health self-management tools for consumers.

Internationally, he consults three to five times a year in Latin American, Africa and Asia, providing assistance in program design, disease surveillance, training trainers and evaluation.

Invited Speakers

Anatomy and Pathology

Shah D. The Art and Science of Teaching. Workshop presentation: Early Career Women Faculty Professional Development Seminar sponsored by the Association of American Medical Colleges and Harvard Medical School; 2009 July.

Biochemistry and Microbiology

Dr. Elaine Hardman: California Walnut Council Scientific meeting, Aug 2008, "Walnut consumption to reduce cancer growth and prevent cancer."

Meeting Presentations

Anatomy and Pathology

Shah D, Alston SR. Disruptive Innovation in Pathology and Medical Education. Graduate Research in Pathology Education (GRIPE) winter meeting; 2009.

Biochemistry and Microbiology

Yu H, Damron FH, Qiu D. Poster describing the role of the sensor kinase KinB in the negative control of alginate production in *P. aeruginosa*. Mid-Atlantic Microbial Pathogenesis Meeting; 2009 Feb 8-10; Wintergreen, Va.

Holley AK, Kiningham KK, Spitz DR, Edwards DP, Jenkins JT, Moore MR. Progesterone Stimulation of Manganese Superoxide Dismutase and Invasive Properties in T47D Human Breast Cancer Cells. Annual Meeting of The Endocrine Society; 2009 June 10-13; Washington, D.C.

Sollars VE. Faculty Learning Style and Student Satisfaction. Annual International Association of Medical Science Educators (IAMSE) conference; 2008; Salt Lake City, Utah.

Adkins NL, Hall JA, Chetel L, Varney M, Sollars VE, Fan J, Niles RM, Georgel PT. Epigenetic Regulation of RAR- β 2 during Melanoma Progression and Retinoic Acid Treatment. (Abstract submitted to Biochemistry and Cell Biology for the International Asilomar Chromatin and Chromosome Conference; 2008 Dec. Publication 2009 June).

Park M. Chmp1A functions as a novel tumor suppressor gene in human embryonic kidney and pancreatic ductal tumor cells. Oral presentation. 4th Annual WV COBRE/INBRE conference; 2008 Oct 26-27; Morgantown, W.Va.

Akinsete A, Ion G, Hardman WE. Maternal Consumption of Canola Oil Reduces Mammary Gland Cancer Risk in C31 Tag Offspring. Poster presentation, Frontiers in Cancer Prevention Research meeting sponsored by the American Association for Cancer Research; 2008 Nov. Work was highlighted as 'newsworthy research' at

**Mark Stecker: New leadership for curriculum**

Mark M. Stecker, MD, PhD, is a tenured professor in the department of neuroscience, director of the neurophysiology laboratory at Cabell Huntington Hospital, director of the Marshall epilepsy program and chair of the medical school's curriculum committee.

His early research was in theoretical physics and he still maintains an interest in electromagnetic modeling in biological systems and in defining the information content of signals such as the electroencephalogram. He is currently vice-chair of the IEEE West Virginia chapter. Basic science efforts also focus on defining the effects of temperature on peripheral nerve and the response of the peripheral nerve to ischemia and mechanical injury.

His clinical research focuses on intra-operative neurophysiologic monitoring as well as epilepsy. He is past president of the American Society of Neurophysiologic Monitoring (ASNM) and is the founding chair of the American Board for the Accreditation of Neurophysiologic Monitoring Programs (ABNMP). He is also founding chair of the Neurophysiology Research and Education Consortium (NREC). The NREC was created in order to collect in a HIPAA compliant manner outcome data about intra-operative neurophysiologic monitoring from multiple centers around the world. He has just completed a term on the American Board of Neurophysiologic Monitoring (ABNM) and has studied the factors that affect the ability of a practitioner to interpret intra-operative monitoring data.

He has played an active role in defining the role of propofol in the treatment of status epilepticus and in understanding anti-epileptic drug prescribing practices in the elderly.

Piyali Dasgupta: Nicotine and cancer growth

Piyali Dasgupta, PhD, is a tenure-track assistant professor in the Department of Pharmacology, Physiology and Toxicology. Originally from India, she completed postdoctoral fellowships at the Columbia University College of Physicians and Surgeons and the H. Lee Moffitt Cancer Center. During her fellowship, she worked with Dr. Srikumar P. Chellappan, a leader in the field of cell cycle research.

She has more than 20 peer-reviewed publications, most as first author, in journals including the Proceedings of the National Academy of Sciences, USA, the Journal of Clinical Investigation, and the Journal of Biological Chemistry. She regularly serves as a reviewer for top-tier journals such as International Journal of Cancer, Toxicology and Applied Pharmacology, and Journal of Cellular Biochemistry.

Dr. Dasgupta's research examines how nicotine, although not a carcinogen, can promote the growth and progression of lung cancers. Her studies indicate it can induce proliferation, angiogenesis and metastasis of lung cancers. Additionally, it can protect lung cancer cells against chemotherapeutic drug-induced apoptosis. These actions of nicotine are mediated by high affinity nicotinic acetylcholine receptors on lung cancer cells. Her lab tries to decipher the signaling pathways involved in this process. On a more basic level, she tries to analyze the physiological function of these neuronal receptors in the lung.

She was one of three researchers nationally to receive the 2009 ASPET-Astellas Award, which recognizes key translational research, from the American Society of Pharmacology and Experimental Therapeutics. Her work at Marshall has been funded by the Pharmaceutical Manufacturers of America and by the American Society of Pharmacology and Experimental Therapeutics.
